nevillepark commented on Aug 6, 2020

Yep, the official keys also stopped working for me yesterday.

lvctr commented on Aug 7, 2020 • edited ▼

F's in the chat boys, none of them work anymore.

EDIT: My settings were wrong. They work fine.

SimoDax commented on Aug 7, 2020

They work for me wtf guys

nevillepark commented on Aug 8, 2020

How are you using them? Any other settings/parameters that might be affecting it?

SimoDax commented on Aug 8, 2020

I'm using OAuth1 (user-auth), signing the requests as per twitter docs. I've never tried OAuth2 (app-auth) so they might as well be dead with it.

lvctr commented on Aug 9, 2020

OAuth didn't work for me but xAuth worked fine. Android keys btw.

twilight-sparkle-irl commented on Aug 13, 2020

How would one xAuth?

AlirezaTheH commented on Sep 9, 2020

How to use twitter webhook with these keys?

nevillepark commented on Sep 12, 2020

How would one xAuth?

I'm using the app [Twidere](#) which allows custom API settings; you can choose between various types of authentication, including OAuth, OAuth2, and xAuth.

However, for me the keys no longer work regardless of which authentication method I use.

twilight-sparkle-irl commented on Sep 25, 2020

@nevillepark The keys work with xAuth, there's just some sort of extra layer of authentication for some sets

nevillepark commented on Sep 27, 2020

@no-boot-device could you expand on that?

twilight-sparkle-irl commented on Oct 2, 2020

@nevillepark Certain apps fail you unless you have IMEI in headers (it's been a while since I wiresharked the Android app)
Use Twitter for iPad keys

nevillepark commented on Oct 11, 2020

@no-boot-device Those keys worked! Thanks for the insight.

KohnoseLami commented on Oct 23, 2020

The general-purpose API of the PIN method can be used only "Twitter for Mac".

"Twitter for Mac" allows you to retrieve information even if the account has been suspended.

The obsolete "Streaming API v1" also works.

AnasQiblawi commented on May 7, 2021 • edited ▾

this website might benefit you

<https://aq-twito.herokuapp.com>

Use Twitter API with these headers.

I remember these headers can be used with Twitter API v1.1

<https://aq-twito.herokuapp.com/headers>

Get @`{Username}` Twitter profile details

<https://aq-twito.herokuapp.com/api/{username}>

Code is open source

Thank you so much, how long do you suppose to support?

AnasQiblawi commented on May 15, 2021

Thank you so much, how long do you suppose to support?

It's something I made for fun a long time ago, and it does need some improvements.

I don't think I will ever take it down.

you can check the code over here:

AnasQiblawi commented on Aug 1, 2021

Sorry guys,

I had to stop my app since it was draining all of my dynos on Heroku website.

If necessary, you may clone and deploy it to your Heroku account.

jkrosado commented on Aug 21, 2021

is it possible to use these on official twitter clients? e.g. mac, ios, etc.
if so, what files do i edit and how

MujurID commented on Oct 5, 2021

Go to Twidere settings > Network > Advance > Default API settings

Then change Auth type to xAuth , with the Twitter for Android consumer key and secret.

After that, you need to re-login by go to Account > Add account (tap the + icon) > Choose Twitter + User settings then fill your credential (ID/Pass) and login again...

thx bro . works

AlirezaTheH commented on Feb 15, 2022 • edited ▾

@MujurID I tried this piece of python code for xauth with Android or iPhone keys but no luck:

```
oauth = OAuth1(consumer_key,
                client_secret=consumer_secret)
r = requests.post(url=access_token_url,
                  auth=oauth,
                  headers={'x_auth_mode': 'client_auth',
                           'x_auth_username': username,
                           'x_auth_password': password})
```

I get Request token missing error. Any idea?

Update:

Just change headers to data and everything is ok.

fahmy554 commented on Feb 16, 2022

i have python script to create access token for android and iphone

iamvinny commented on Nov 6, 2022

i have python script to create access token for android and iphone

Would you mind sharing with us?

NotNite commented on Feb 3

Thank you for this! Will prove exceptionally useful soon.

EshuMarneedi commented on Feb 3

Does anyone know the callback URL I can use for these for OAuth? I have a third party client that I can input a custom API key into and I'd like to use these (I don't care if I get suspended). It just asks for a callback URL.

Derpitron commented on Feb 3

Oops

thepwrtank18 commented on Feb 4

hmm-web commented on Feb 4

Nice

ccarplog commented on Feb 11 • edited ▼

I'd also like to know the same as **@EshuMarneedi**

Hasan5750 commented 3 weeks ago

Could you write a shell script or provide a method to add consumer key and consumer secret options to other dead 3rd party twitter apps?
